Harmon McAllister, Ph.D.
Scientific Director
The Council for Tobacco Research-USA, Inc.
900 3rd Avenue
New York, NY 10022

Dear Dr. McAllister:

On October 26, 1991, the Lucille Parker Markey Cancer Center of the University of Kentucky will host its Fourth Annual Symposium, an event which The Council for Tobacco Research has been generous enough to support in the past.

This year our program will focus on the newest technologies of molecular biology as they relate to cell regulation and promotion of malignant diseases. It is our objective to translate recent laboratory advances into terms relevant for the clinician as well as basic scientists in other fields.

As a special portion of the program, we will emphasize the utilization of new technologies for identification of populations at risk for development of cancer. We will also address the availability of biological markers and available screening technologies.

A copy of the tentative program is attached. Your help in promoting these meetings has focused attention upon the research capabilities which are now available in this relatively rural area. We would deeply appreciate a grant of $2,000 to assist us in the cost of underwriting this program, open at no cost to members of the scientific community, both here at the University of Kentucky and in our sister institutions in the area.

Respectfully,

GH Friedell / LK

Gilbert H. Friedell, M.D.
